

Signage has become the choice in modern days to convey message to visitors of a venue. Be it corporate office, shops, restaurants or any kind of social functions like marriages. Our display shows a message that scrolls from left to right on a LED display screen. To make it easy to use they don't need any PC to program message to it.

A PS2 keyboard can be attached to a system and message is typed, can be checked and transferred to the display from more than 100 meter distance.

Message is transferred wirelessly to the sign board. For further clarification and quote please feel free to contact us at
